

SAHIL KUMAR

People Analytics Analyst | People Insights, Workforce & HR Reporting

London, UK | +44 7562 267 371 | sahil05919@gmail.com | LinkedIn

PROFILE

Analytics professional with 3+ years of HR and recruitment experience, an MSc in Business Analytics, and strong Power BI, Excel and SQL capability. Experienced in turning workforce, attrition and recruitment data into dashboards and insight that HR and business leaders use to make decisions, including leading a team of three. AIHR People Analytics and HR Business Partner certified, with a track record of process improvement and dashboard automation.

CORE SKILLS

- People Analytics & HR Reporting:** Headcount and workforce reporting · Attrition and turnover analysis · Recruitment funnel and time-to-hire analysis · Absence and tenure analysis · Salary benchmarking · GDPR-compliant HR data handling
- BI, Reporting & Data:** Power BI (PL-300, DAX, data modelling, star schema) · Excel (Power Query, pivot tables) · SQL · Python (Pandas) · Tableau · Dashboard design and automation
- HR & People Experience:** Employee lifecycle support · Team leadership (led a team of 3) · HR business partnering · Stakeholder and leadership reporting · Process improvement
- Tools & Systems:** Microsoft 365 · Google Sheets · Oracle ERP · Recruitment/ATS platforms (Naukri, LinkedIn Recruiter, Zoho Recruit, Lever, Greenhouse, Workable)

RELEVANT PEOPLE ANALYTICS EXPERIENCE

- Senior Talent Acquisition & Junior Data Analyst** — Enhanceer, Ahmedabad, India *Sep 2023 – Aug 2024*
- Analysed the candidate funnel by cohort to pinpoint exactly where applicants were dropping out, enabling process fixes that cut time-to-hire by 20% overall.
 - Automated recruitment reporting with Power Query ETL workflows, freeing over 8 hours per week previously spent on manual reporting for the HR and talent team.
 - Built SQL-driven Power BI dashboards covering the full recruitment funnel, giving hiring managers and leadership direct visibility into stage-by-stage conversion and pipeline health to support hiring decisions.
- Technical Recruiter & HR Analyst** — SolutionTech HR, Gurugram, India *Jul 2021 – Aug 2023*
- Analysed 200+ hiring campaigns through Power BI and Excel dashboards, giving leadership clearer, campaign-level visibility to inform hiring decisions.
 - Automated ATS data extraction and reporting workflows, cutting manual reporting effort by 35%, and ran salary benchmarking to support data-driven, evidence-led hiring decisions.
 - Led a team of 3 in the final year of tenure as the most senior team member, overseeing hiring campaign delivery and HR reporting for leadership.

ADDITIONAL UK EXPERIENCE

- Finance Assistant — Accounts Payable** — Middlesex University, London, UK *Apr 2026 – Present*
- Identified a process gap in supplier account setup, then designed and introduced a weekly manager sign-off workflow adopted team-wide — reducing verification bottlenecks and improving approval turnaround.
 - Built Power BI dashboards tracking invoice ageing and outstanding liabilities, used by the team to prioritise overdue payments.
 - Process and reconcile high-volume supplier transactions in Oracle ERP, investigating exceptions and payment holds.

ADDITIONAL UK EXPERIENCE (CONTINUED)

University Operations & Student Support (Unitemps) — City St George's, London, UK

Sep 2025 – Apr 2026

- Completed 30+ assignments across 8+ university departments (Learning Success, Central Exams Office, International Office, Students' Union) alongside full-time MSc study, supporting staff and students across people-facing processes and administrative reporting.

Data Analyst (Fixed-term contract) — Rauha (AI start-up), London, UK

Nov 2024 – Dec 2024

- Sourced data using SQL and structured/cleaned over 10,000 IoT sensor records in Python, improving dataset reliability for downstream analysis.
- Designed Power BI dashboards (DAX, star schema) to automate reporting and track key operational performance metrics.

KEY PEOPLE ANALYTICS PROJECTS

Employee Attrition Analysis — MSc Project, Bayes Business School

Problem: Identify which workforce factors were most associated with employees leaving.

Method: Cleaned and prepared over 10,000 employee records in Python (Pandas), analysed attrition patterns, and built a Power BI dashboard to visualise the findings.

Insight: Overtime, job satisfaction, income level and tenure emerged as the strongest predictors of attrition — employees with higher overtime and lower job satisfaction showed markedly higher attrition rates.

Business relevance: Turned a single attrition figure into a view of where retention effort would have most effect.

Recruitment Analytics Dashboard

Problem: Hiring performance was reported as raw totals, with limited visibility of where candidates were lost or how long each stage took.

Method: Consolidated multi-source recruitment data into a Power BI model (star schema, DAX) covering time-to-hire, stage conversion and source effectiveness.

Insight: Drop-off was concentrated at the screening and interview stages; comparing time-to-hire and conversion by source pinpointed exactly where the funnel was leaking and which sources performed best.

Business relevance: Gave hiring managers a clearer, self-serve view of pipeline health.

EDUCATION & CERTIFICATIONS

MSc Business Analytics (Merit) 2024 – 2025

Bayes Business School, City, University of London

- Co-President, Bayes Business Analytics Society

MBA — Human Resources & Finance 2019 – 2021

Kurukshetra University, India

BBA — Business Administration 2016 – 2019

Kurukshetra University, India

Certifications

- Microsoft Power BI Data Analyst Associate (PL-300)
- AIHR People Analytics Certificate Program
- AIHR HR Business Partner
